

Useful variables

Calling a variable

```
$smarty.const.WEBSITE_ROOT}/{ $smarty.session.session_lang/index.php
```

The above code will call two variables. The WEBSITE_ROOT and session_lang. If you place the whole code into a link it will point to the index of the chosen language.

WEBSITE_ROOT --> your domain path, for example <http://yourdomain.com> or <http://www.yourdomain.com>

THEME_ROOT --> the full path to theme, for example <http://yourdomain.com/templates/themes>

ADMIN_STYLE --> the full path to administration theme, for example <http://yourdomain.com/templates/admin>

GalleryPath --> the full path to gallery images, for example /home/yourusername/public_html/portal/gallery/images/

Important Notice

Most of the variables outlined here are those configured on <includes/settings.php>
